

West Nile Encephalitis

Reduce Your Risk.

Control mosquito breeding hotspots.

■ **Eliminate** standing water.

Start Now!

Mosquitoes, the transmitters of the West Nile virus, can breed in any puddle of water.

- **Landscape** your property to reduce low spots.
- **Remove** anything from outside that holds water.
- **Check** storm drains, leaky faucets and window wells.
- **Clean and chlorinate** all pools as needed.
- **Don't allow** water to stagnate in birdbaths, pools or ponds.
- **Clean** clogged roof gutters and spouting every year.
- **Aerate** ornamental pools and/or stock with fish.
